Preparation Sheet for Cockroach Treatment

Here is how we will ask you to prepare for service to control German cockroaches:

1. Before the technician arrives, remove all contents from kitchen and bathroom cabinets. Stack food, dishes, etc. in a room other than the kitchen or bathroom and cover items with a sheet, blanket, or similar material.
2. Once all cabinets are empty, please clean cabinet interiors and shelves. Additionally, please clean under and behind refrigerator and around the stove/oven.
3. Remove all kitchen drawers from the kitchen, stack and cover. Please make sure drawers and their contents are clean before returning them to the kitchen. Alternatively, drawers may remain in place but all drawer contents must be removed and placed with the other items removed.
4. Remove contents of closets only if closets are infested.
5. If you have a fish tank please cover it with a towel, sheet, or similar material, and turn off all aeration equipment until material is dry.
6. The technician will advise you how long to be out of your unit, but please be prepared to vacate for as much as three hours. This means people and pets must leave the house when the pest control technician arrives. The vacated time may be less depending on the materials used.
7. You may replace materials to kitchen or bathroom cabinets after you return. Our application will not harm food or dishes. After your home has been treated, do not clean cupboards with wet materials until control has been established (at least 3 weeks) to ensure the active material is not removed.

Cockroach control may take three weeks after the time of service. Please call our office for a follow-up appointment if you still see live roaches three weeks after your initial service.
